NEO

INTEGRATED HEALTHCARE TECHNOLOGY

Website Features & Technical Requirements

Functional scope, CMS, forms, architecture, SEO, security and handover

Purpose
Practical working brief for NEO's design, webmaster, content and development teams.

Working document | 02 November 2026

1. Feature requirements

Feature	Priority	Requirement
Responsive UI	Must	Desktop, tablet and mobile layouts; test common viewport sizes.
Bilingual CMS	Must	English and Indonesian, locale management and language switcher.
CMS administration	Must	Author/editor roles, preview, draft, approval and publishing.
Contact forms	Must	Enquiry types, validation, spam controls, secure routing and clear success/error states.
SEO foundation	Must	Metadata, canonical URLs, sitemap.xml, robots.txt, redirects and appropriate structured data.
Analytics	Must	Measure page views, CTA clicks and successful enquiry submissions.
Security	Must	HTTPS, MFA for admin, least-privilege access, patching, backups and monitoring.
Performance	Must	Optimised images, caching, limited scripts and Core Web Vitals monitoring.
Insights CMS	Must	Categories, author, date, related articles and search/filter if needed.
Accessibility	Must	Semantic headings, keyboard access, contrast, form labels and alt text.
Careers module	Later	Add when vacancies and recruitment content owner exist.
Partner portal	Later	Separate project after roles, access and data flows are defined.
KHAYR app login	Separate system	Do not embed patient or clinic application functionality in corporate site.

2. Contact form specification

Suggested fields

• Full name (required)

• Business email (required)

• Organisation (optional or conditional)

• Country / market (optional)

• Enquiry category: General; Business & Strategic Partnerships; Healthcare Solutions; Technology & Integration; Media & Corporate; Careers

• Message (required)

• Privacy acknowledgement where applicable

Form behaviour

• Inline validation and clear error messages.

• Spam protection without unnecessary friction.

• Confirmation message after successful submission.

• Email notification to controlled corporate mailbox.

• Collect only necessary information and define retention/deletion rules.

• Do not request patient names, medical records or sensitive health information.

Privacy notice, consent wording, storage location, retention period and cross-border processing must be reviewed by NEO's legal/privacy adviser.

3. CMS roles

Role	Permissions
Administrator	Manage users, configuration, publishing and integrations.
Editor	Create and edit pages/articles; submit for approval.
Approver	Review and publish approved content.
Translator	Edit assigned language content; publishing only if authorised.
Analyst	Read analytics; no content publishing.

Use individual accounts, MFA and least-privilege access. Do not share administrator credentials between NEO and agency staff.

4. Technical architecture

Recommended direction: Next.js or equivalent modern frontend, with a managed CMS such as Sanity or Strapi, deployed on a reputable hosting platform with CDN, HTTPS and automated backups. Final selection should reflect the webmaster team's expertise, total cost of ownership, support model and security capability.

CMS stores corporate website content only. KHAYR application infrastructure and patient data must remain separate, with separate access controls, environments and security governance.

Environments

• Development: build and component testing.

• Staging: NEO content review and acceptance testing.

• Production: public website with controlled deployment and rollback.

Operational requirements

• Domain registrar and DNS ownership remain under NEO's control.

• Use company-controlled hosting and billing accounts.

• Enable HTTPS, backups, monitoring, uptime alerts and dependency updates.

• Document deployment, recovery, access and vendor handover procedures.

5. SEO and analytics

SEO

• Unique title and meta description for every indexable page and locale.

• Logical heading hierarchy and descriptive URLs.

• XML sitemap, robots.txt, canonical and language alternate tags.

• Social preview metadata.

• Optimised images with descriptive alt text.

• Internal links between corporate, product and insight pages.

Analytics events

• Primary CTA click

• Partnership CTA click

• Contact form start

• Successful contact submission

• KHAYR product page view

• Insight article engagement

Analytics and cookies must follow an approved privacy and consent approach.

6. Launch and handover

• Domain, DNS and hosting are controlled by NEO.

• CMS access and MFA are tested.

• All forms route to correct recipients.

• Backup and restore process is tested.

• SEO redirects and metadata are checked.

• Accessibility, browser and mobile tests are complete.

• Security and dependency review is complete.

• Source repository, design files, credential inventory and operating manual are handed over.

• Contract defines ownership of code, content, design assets and exit assistance.

7. Phase-one exclusions

• No patient portal or patient health information collection.

• No KHAYR clinic workflow or application login.

• No online payment or subscription checkout unless separately scoped.

• No partner portal or authenticated ecosystem.

• No unverified compliance, certification or live-integration claims.
